**LegalSoft software enables the successful management of debt recovery, which makes for increased turnover and profit.**

Outstanding debtor accounts result in recovery cost and an overall decrease in company profit. This calls for effective management of debt recovery.

**LegalSoft**, established in 2001, is a software company supporting the legal and financier fraternity, debt recovery specialists, as well as public and private sector credit control departments, with cost-effective user friendly software to recover outstanding debts. The software produces up to date debt recovery process and workflow reporting, inclusive of the judicial documentation requirements, irrespective of the size of your debtor book.

Our software is designed to assist the range of small, medium and macro enterprises in debt recovery. The most important facet of our software is our frequent updates, which ensure alignment with evolving judicial requirements and recovery market trends.

In addition to debt recovery management software, we offer clients a business systems review with recommendations towards achieving maximum growth and net profit.
